**La web de los 90's
ROCKEABA**

¡NO ES UN CHISTE!

Ya les explicaré por qué. No me maten

Todos nosotros.

Desarrolladores que hacemos de la web, un lugar
no tan genial como podría serlo.

2   <gmail-tab category = "primary">
3   </gmail-tab>
4 </gmail-tabs>
```

Web components!

Definición :

Los web components son una nueva tecnología, adoptada paulatinamente por todos los navegadores modernos, que nos permite **extender y personalizar HTML** tal y como los conocemos.

¿Qué necesito?

- Custom elements
- Shadow DOM
- HTML templates
- HTML Imports

Custom elements:

Custom Elements is a capability for **creating your own custom HTML tags and elements**. They can have their own scripted behavior and CSS styling. They are part of Web Components but they can also be used by themselves.

Shadow DOM

Shadow DOM **provides encapsulation** for the JavaScript, CSS and templating in a Web Component. Shadow DOM makes it so these **things remain separate from the DOM of the main document**. You can also use Shadow DOM by itself, outside of a web component.

HTML templates:

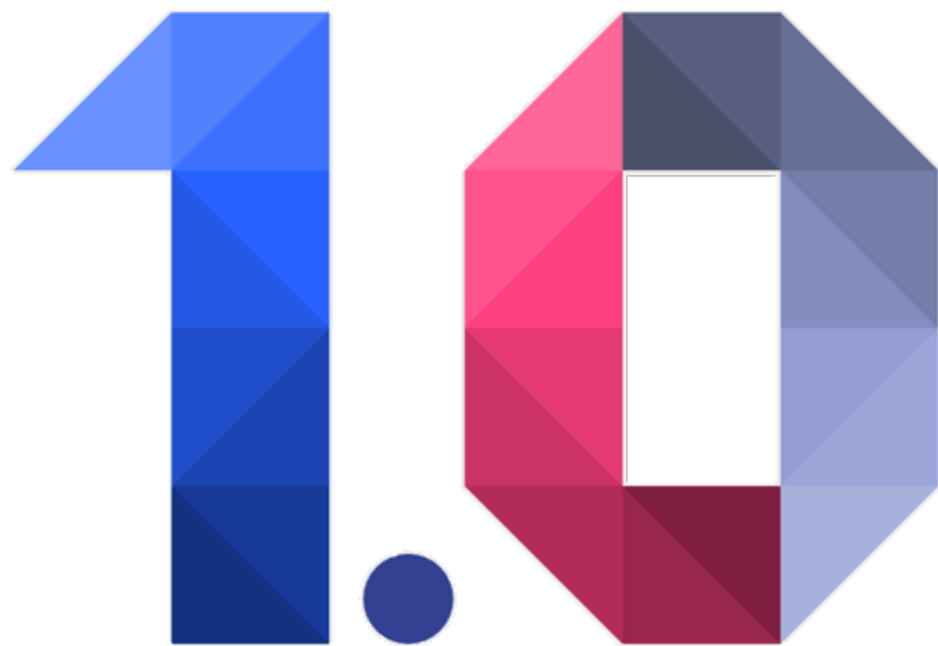

The HTML template element `<template>` is a mechanism for holding client-side content that is not to be rendered when a page is loaded but may subsequently be instantiated during runtime using JavaScript.

HTML imports:

HTML Imports is intended to be the packaging mechanism for Web Components, but you can also use HTML Imports by itself.

Let's code!

Production Ready
